STA 474 – Accessing R and RStudio

You may want to consider downloading R and RStudio to your own computer. For details, please read chapter 1 of the STA 444/445 notes.

Alternatively, consider running RStudio (and thus R) in Adel Math Room 222, using Remote Desktop Connection, or https://apps.nau.edu/.

To use the Remote Desktop Service from off campus you must first setup VPN. See https://nau.edu/its/remote-desktop/ for details. Alternatively, NAU's Windows Virtual Desktop allows current NAU students, faculty, and staff access to licensed applications from a variety of operating systems. When using https://apps.nau.edu/, consider various options. e.g., RStudio, vDesk - Full Desktop, or CEFNS CEIAS Full Desktop.

Using the console window in RStudio, concerning functions such as pnorm(), qnorm(), pt(), qt(), pchisq(), qchisq(), pf(), and qf(). To learn more about, say, pnorm, type help(pnorm) in the console window.
